

I support elimination of the CW requirement for General and below classes of amateur license. However, privileges should be instituted with an incentive tier structure.

The current No Code Technicians should be given voice privileges upon those bands not experiencing crowded usage such as 15, 12, 24 and 10 meter bands.

Additionally they should have all CW subsections including 30 meters available for use to become proficient in CW toward obtaining the Extra Class license.

General Class privilege should remain the same for all bands and the test should be increased in technical difficulty.

The Extra class should retain the 5 WPM code requirement along technical test on advanced topics such as digital and other advanced communications topics.
